HOTBOX MISTRAAL

CIRCULATION FANS

INSTRUCTIONS

Hang the MISTRAAL circulation fan in a suitable position in your greenhouse using the chains and hooks supplied. See drawings below.

MISTRAAL FANS ARE DESIGNED TO MEET THE REQUIRMENTS OF THE EUROPEAN COMMUNITY MACHINERY DIRECTIVE. FOR THE INSTALLATION TO MEET THESE REQUIREMENTS WE RECOMMEND THE FAN BE INSTALLED AT A MINIMUM HEIGHT OF 2.4mts FROM THE FLOOR.

As MISTRAAL fans are designed specifically for use in commercial greenhouses, the front guards are only needed for installation at heights lower that 2.4 metres).

MISTRAAL FANS have sealed motors to IP34 Standards, which make them particularly suitable for use in greenhouse environment. This does not however, remove the need for the grower to be vigilant in care of electrical equipment with irrigation systems.

IMPORTANT - Select the position of your Mistraal fans to give GOOD CIRCULATION
